

DSG Physics Rules Summary

1. Energy Rule

Energy changes only when D or S changes.

$$E = D \times S$$

$$\Delta E = \Delta D \times S + D \times \Delta S$$

2. Momentum Rule

Momentum is just $D \times S$, and it only changes when G acts.

$$P = D \times S$$

$$\Delta P = G$$

3. Charge Rule

Charge is a special form of D, moved by S.

$$\Delta \text{Charge} = D \times S \text{ flow}$$

4. Continuity Rule

Density moves but never disappears.

$$D_{\text{next}} = D_{\text{now}} + (S \times D \text{ flow})$$

5. Force Rule

Force is gravity acting on density differences.

$$F = G \times \Delta D$$

6. Wave Rule

A wave is just speed changes moving through density.

$$\text{Wave speed} = S \times D \text{ pattern}$$

7. Distance Rule

Gravity weakens with distance because density spreads.

$$G \text{ effect} = G / \text{Distance}^2$$

8. Small-Change Rule

Small density changes produce proportional speed changes.

$$\Delta S = \text{Constant} \times \Delta D$$

9. UBL Update Rule

The next state is just DSG interacting.

$$\text{State next} = \text{State now} + (D + S + G \text{ interactions})$$
